

WinACD is Compuflex's Windows-based connectivity software that allows you to connect to all popular cash dispensers from virtually any Windows-based teller platform. By pressing a pre-defined "hot-key", your tellers can automatically transfer dispense information from their main teller package to Compuflex's dispensing module. After the dispense is complete, focus is automatically returned to the teller application.

FEATURES

- Designed for all 32-bit Windows Operating Systems.
- One-Time setup allows you to specify hot-key to call dispenser module and data capture settings.
- Eliminates need to reenter dispense amounts, thus minimizing data entry errors.
- Handles dispenser inventory management.
- Fully balances cash dispenser and connected stations.
- Provides detailed transaction journal of all cash handles by the dispenser.
- Supports teller Vault Buy transaction on the same station.
- Supports multiple teller totals.
- Unlimited number of dispense screens can be set up.
- Provides transaction journal of all cash handled by the dispenser.

Balancing made easy. WinACD's balancing screen allows users to view and clear dispenser totals with a few simple clicks.

With WinACD's Nominate screen, tellers can pay customers specific denominations that are requested without having to open their teller drawer.

Teller setup allows users to be added to WinACD's database with only a few key strokes.

WinACD's journal gives detailed information on all transactions and balancing information.

NEW FEATURE:
Auto activation without the need for a 'Hot Key'. In many instances, you can now mark an application's button to initialize a dispense.
